Work Experience

Software Engineer Aug 2024 - Present
FIS Global - Ubix is a real-time global back-office system for managing cleared derivatives. It's designed to support both sell-side and buy-side. My role:
• Led the migration of a legacy desktop application to a modern Angular web interface, collaborating with architects to define scalable web architecture.
• Developed autopilot dashboard featuring real-time procedure orchestration with parallel execution capabilities, dynamic status monitoring, and automated workflow management for trading operations.
• Designed and developed RESTful APIs with caching mechanisms.
• Created detailed technical documentation to support future maintenance and development.

Technologies: Java • Spring Boot • Angular • C • Python • Oracle/PLSQL • Git.

Software Engineer Jan 2024 - Aug 2024
OneTECH Business Solutions – Integrates the Backbase digital banking platform for banks in Africa, helping them modernize operations and improve customer experiences across all banking segments. My role:
• Designed and deployed a scalable integration layer for a retail banking platform, enabling seamless communication between core banking systems and Backbase.
• Ensuring system scalability and security with cloud infrastructure on Azure and Docker.
• Integrated Keycloak for secure OAuth2-based authentication and authorization.
• Version control and deployment through Git and Github Actions.

Technologies: Java • Spring Boot • Docker • Kubernetes • MySQL.

Internships

Software Engineer Intern Feb 2023 - Jun 2023
Cognira specializes in providing advanced AI-driven decision support solutions for retailers, enabling smarter promotional strategies and optimized business decisions.
• Designed and implemented a generic rule engine for data validation, reducing data errors by 30% and improving data quality.
• Implemented a compiler to parse rules into ASTs, enabling efficient execution of complex validation logic.

Technologies: Scala • Akka • Docker • Kubernetes • CassandraDB • Python • Git.

Software Engineer Intern Jul 2022 - Aug 2022
BNA is a leading Tunisian bank actively supporting the national financial inclusion and decashing strategy through innovative digital solutions.
• Designed and implemented a RESTful API for secure and seamless bill payments.

Technologies: Java • Spring Boot • Git • MySQL.

Projects

NSWH Calculator 2024
• Built a web app to calculate work hours and overtime pay with user login and PDF reports. **Technologies:** Python, Svelte, TypeScript, PostgreSQL.

Verbal Aggression Detection & Real-Time Alert System 2022
• Developed a system for verbal aggression detection, within RIADI Laboratory, using audio processing and machine learning.
• Implemented real-time alert mechanism to notify patrols.

Technologies: Python, Machine Learning, QGIS, React Native

Education

Computer Science Engineering Diploma Sep 2020 - Jul 2023
National School of Computer Science - ENSI

Subjects: System Design, Algorithm Optimization, Computer System, Software Quality&Test, Distributed System, SQL/NoSQL Databases.

Pre-Engineering studies: Mathematics-Physics Sep 2018 - Jul 2020
Preparatory Institue for Engineering Studies of Nabeul - IPEIN

Subjects: Mathematics, Algorithms, Linear Algebra • Advanced Calculus • Physics.
